GitHub: github.com/Meghana-HM-1007

PROFESSIONAL SUMMARY

Computer Science undergraduate (CGPA 8.8/10) with hands-on full-stack experience in Python, React and Node.js/Express, plus SQL and REST API development. Built AI/ML systems using transformer models (BERT, RoBERTa) and a full-stack expense tracker with JWT authentication. Seeking a Software Development Engineer internship at Templegate to build production web applications and grow in the Python, React and PostgreSQL stack.

TECHNICAL SKILLS

Languages: Python, JavaScript, Java, C, SQL
Frontend: React, HTML, CSS
Backend: Node.js, Express, Flask, REST APIs, JWT NPM
Databases: SQL, MongoDB
AI / LLM: BERT, RoBERTa, OpenAI GPT models, LIME, SHAP, YOLOv8, OpenCV
Tools & Platforms: Git, GitHub, Ubuntu/Linux, AWS (basic hands-on), VS Code, Google Colab
Basic Knowledge: Django, PostgreSQL, Docker, NGINX, Gunicorn, Bootstrap
Practices: AI-assisted development, version control workflows, REST API design

PROJECTS

SpendWise: Full-Stack Expense Tracker | *React, Node.js, Express, MongoDB, Tailwind CSS, JWT, Recharts* | 2026

- **Achievement:** Built a full-stack expense tracker with a React frontend and a Node.js/Express REST API on MongoDB (github.com/Meghana-HM-1007/expense-tracker). **Challenge:** expense data is personal, so each user's records had to be protected with JWT-based authentication. **Benefit:** users track spending securely, with Recharts visualizations, dark mode and a mobile-responsive layout.

TrustGuard: Explainable AI for Fake Review Detection | *Python, BERT, RoBERTa, LIME, SHAP* | 2026 - Present

- **Achievement:** Building an ensemble of BERT and RoBERTa with weighted prediction aggregation to detect AI-generated and human-written fake reviews. **Challenge:** models must generalize across review sources, so multi-source datasets are being curated. **Benefit:** more robust detection beyond a single dataset.
- **Achievement:** Integrating LIME and SHAP for token-level explanations. **Challenge:** transformer predictions are hard to interpret. **Benefit:** each flagged review comes with a visible reason.

BrickLayer Protocol: Web3 Real Estate Tokenization | *Solidity, Arbitrum, Web3* | 2025

- **Achievement:** Built and deployed Solidity smart contracts on Arbitrum that tokenize property shares. **Challenge:** ownership and transactions had to be verifiable without a central intermediary. **Benefit:** fractional property ownership with on-chain ownership tracking and transaction verification.

Pothole Detection System | *Python, YOLOv8, OpenCV* | 2025

- **Achievement:** Detected and classified potholes using YOLOv8 and OpenCV. **Challenge:** turning raw detections into something usable for repair planning. **Benefit:** annotated outputs and structured maintenance reports that help prioritize road repairs.

Fake News Detection System | *Python, NLP, TF-IDF* | 2025

- **Achievement:** Built an NLP classification pipeline (TF-IDF, tokenization, stemming). **Challenge:** choosing the best-performing model. **Benefit:** models compared on Precision, Recall and F1-Score, so the selection is evidence-based.

EDUCATION

Shridevi Institute of Engineering & Technology, Tumakuru | Aug 2023 - May 2027
B.E. in Computer Science and Engineering | CGPA: 8.8 / 10.0

SSEA PU College | Aug 2021 - May 2023
Pre-University Certificate (Class XII) | 90%

CERTIFICATIONS & ACTIVITIES

- NPTEL (IIT Madras): Programming in Java (Elite, 95%) and Computer Networks
- Infosys Springboard: Introduction to OpenAI GPT Models
- Salesforce Trailhead: Agentblazer Champion 2026
- Active Member, Creative Codex Club (2024 - Present): technical events, workshops and hackathons in software development and AI
